TWINSTAR MODEL 265 6-BAR BASKET RAKE

Cleaner hay brings higher returns and provides more nutrients in hay and silage

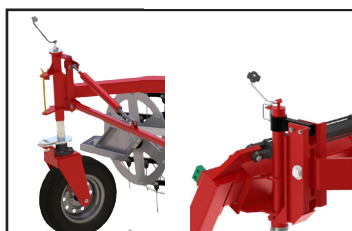

- Twinstar Basket rakes produce consistent uniform windrows and the cleanest hay in the industry.
- Twinstar Baskets are designed with Stripper Bars that help carry the hay which helps produce cleaner hay, instead of dragging hay along the ground.
- Basket height is easily adjustable allowing the teeth to engage the crop (not the ground) which helps produce cleaner hay.
- Twinstar Basket Rakes are hydraulically driven and allows the operator to control basket RPM speed for specific field or crop conditions. Slower basket speed is gentler on hay and less leaf loss in alfalfa and allows the operator to rake longer in the day.
- Cleaner hay means less maintenance on balers.

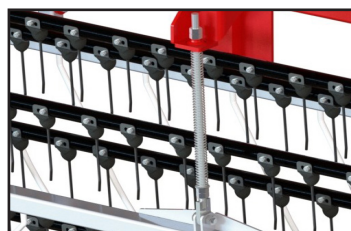

Field test measuring the percentage of contaminants in raked hay with comparable width hay rakes. Results may vary due to equipment settings and field & crop conditions.
